The Texas Lottery is Proposing to Change Lotto Texas.

The proposed plan: To win the jackpot, players would pick 5 numbers from one set of 44 balls then pick 1 number from another set of 44 balls. 88 balls total. The odds of winning the jackpot prize would increase to 47.7 million-to-one. The purpose is to prevent players from winning the 1st prize (jackpot), enabling the jackpots to grow. In essence, the lottery wants to make more money by enticing sales. If you agree with the following sentence, then please sign.

I oppose proposed rule, 16 TAC 401.305, because it makes winning the Lotto Texas jackpot (1st prize) harder to win and I play to win the jackpot. I feel the Texas Lottery is taking advantage of the people of Texas by proposing such a game.
